Special issue of the Journal of Automated Reasoning

on

Security and Rewriting Techniques

Call for Papers

Scope:

Rewriting Techniques in a broad sense, including for instance constraint solving techniques, logic programming and automata techniques, has been recently applied with success in various areas of security. Typical examples include security protocols, web services, security policies, access control.

We seek for submissions of original research papers in these areas. They will be evaluated according to the high standards of the *Journal of Automated Reasoning* and accepted papers will appear in a special issue of this journal.

Submissions:

Submissions, in pdf format, must be sent to the two guest editors by E-mail, no later than

October 2, 2009

We encourage the use of the Journal's latex macro package, that can be retrieved from `http://www.springer.com/computer/foundations/journal/10817`.

Editors:

Hubert Comon-Lundh	`comon@lsv.ens-cachan.fr`
Catherine Meadows	`catherine.meadows@nrl.navy.mil`

Please send any further inquiry to any of the two above editors.
